EDUCATION

California State University, East Bay | Hayward, CA

Jan 2023—Dec 2026

B.S. in Computer Science — GPA: 3.68/4.0

Gujarat Technological University | Surat, India

Aug 2019—May 2022

Diploma in Information Technology — GPA: 9.8/10

EXPERIENCE

Co-Founder & Co-President | HackHayward

June 2024—Present

- Raised \$20,000 in sponsor funding from Google, Amazon, IBM, and DoorDash for the 2024 event, running a hands-on Google ADK workshop on AI memory systems and moderating a founders panel for 200+ attendees.
- Secured an additional \$18,000 in funding for the 2025 event, coordinating 11 judges and 2 keynote speakers and running enablement sessions that gave attendees hands-on experience building with AI tools and APIs.

President | Google Developer Groups on Campus, CSU East Bay

Aug 2024—Present

- Grew membership from 300 to 570, running 11 technical workshops with 40-50 attendees each, designing hands-on labs and demo environments that made AI and engineering concepts accessible to people at different experience levels.
- Managed ops across technical and finance teams, handling scheduling, budgets, and stakeholder coordination.

Software Engineering Fellow | Headstarter AI

July 2024—Sept 2024

- Shipped 8+ production features in Python, Java, and JavaScript across backend and frontend surfaces, going through 20+ code reviews with senior engineers and building evaluation pipelines for Claude and Gemini API integrations that tracked accuracy and latency.
- Maintained CI checks and wrote unit and integration tests, leaning on AI-assisted coding tools like GitHub Copilot and Cursor to debug faster and improve code quality across the delivery cycle.

Software Engineering Intern | KIT Solutions

June 2022—Aug 2022

- Built 5+ REST APIs and backend services in Java and Python for SaaS and ERP products, designing decoupled interfaces and writing tests so each component could be independently deployed and verified end to end.

WORKSHOPS HOSTED

Introduction to Google ADK | Google Developer Groups, CSU East Bay

Nov 2025

- Designed and delivered an ADK Master Class to 40+ attendees across 7 hands-on sessions on building production-grade multi-agent AI systems with Google's Agent Development Kit and Gemini API.
- Taught agentic patterns including Sequential, Parallel, and Loop workflow agents, Orchestrator-Routing for hierarchical delegation, ReAct-style reasoning, and Agent-as-Tool composition for multi-agent collaboration.
- Covered the full development lifecycle: GCP Console setup, Gemini API integration, ADK installation, agent deployment, and external tool integration like Google Search.

Machine Learning with TensorFlow & Google Colab | CAHSI GMIS 2025

Oct 2025

- Co-led an ML workshop with Professor Lynne Grewe (CSU East Bay iLab Director) on computer vision and language models using TensorFlow and Google Colab.
- Walked 40+ participants through hands-on image classification, covering training, parameter tuning, and model evaluation.

PROJECTS

Cross-Agent Shared Memory System | Python, FastAPI, PostgreSQL, pgvector, Docker, SQLAlchemy, Kubernetes

Jan 2026—Feb 2026

- Designed a distributed backend with 8+ REST endpoints supporting 10+ concurrent AI agents at sub-500ms latency, using pgvector for semantic memory retrieval and MCP-style server patterns for agent-to-agent context sharing.
- Used optimistic concurrency control and versioning to handle concurrent reads and writes from multiple agents, validated across 2,000+ test requests with zero data loss.
- Built in Prometheus and Grafana from the start with structured logs, cutting failure triage time by 60% by surfacing run-level errors before they became outages.

Event-Driven Automated Trading Bot | Python, MetaTrader5 API, RL, Redis, Kafka, Performance Profiling

June 2025—Nov 2025

- Trained a reinforcement learning model in PyTorch over 39+ strategy configurations to pick the best-performing strategy depending on current market conditions, hitting 67% accuracy across 100+ live trading decisions.
- Built a fault-tolerant Kafka and Redis data pipeline for high-frequency streaming data, implementing retry and reconciliation logic at the networking layer to maintain availability under failure conditions.
- Profiled latency, throughput, and error rates across the pipeline, tracked down bottlenecks in ingestion and serving, and improved throughput by 35% through targeted backend optimizations.

AI Agent-Based Automation Tool | Python, LangChain, PyTorch, LLM Inference, Gemini APIs, Flask

Oct 2025—Nov 2025

- Combined RAG with HuggingFace embeddings into a multi-step agent workflow, spending most of the effort tuning chunking and retrieval so the agent pulled the right context instead of hallucinating, handling 1,500+ requests per session.

- Wired evaluation pipelines into CI to benchmark output quality across different LLM backends, catching accuracy regressions before they reached production.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C++, C#, SQL

AI/ML: LLMs, RAG, Multi-Agent Systems, LangChain, Reinforcement Learning, Prompt Engineering, MCP, PyTorch, TensorFlow, HuggingFace, Gemini API, Google ADK, LLM Evaluation

Backend & APIs: FastAPI, Flask, Node.js, REST APIs, gRPC, Microservices, SQLAlchemy

Web: React.js, Next.js, Redux, HTML, CSS

Cloud & DevOps: AWS, Google Cloud, Azure, Docker, Kubernetes, CI/CD, Linux

Databases: PostgreSQL, pgvector, Redis, MongoDB, MySQL

Tools: Git/GitHub, Kafka, Prometheus, Grafana, GitHub Copilot, Cursor, JUnit, Openclaw
